Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template

Brainstorming was used to identify practical ways to improve the car rental request process. The team considered request submission, approvals, vehicle availability, task assignment, notifications, and request tracking, and then prioritized the ideas based on importance and feasibility.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem Statement:

Employees requesting rental vehicles may need to coordinate manually with managers and transport teams. This can lead to delays, incomplete information, unclear approval status, and difficulty tracking requests. A centralized ServiceNow solution is required to automate the car rental request process.

Selected Project: Car Rental Request Automation in ServiceNow using Service Catalog and Workflows.

Objective: Provide a standardized catalog form and automate approval, fulfillment task creation, catalog-variable retrieval, notifications, and request tracking.

Step-2: Brainstorm, Idea Listing and Grouping

Idea	Category	Description
1. Car Rental Request Form	Request Management	Create a Service Catalog item with Requested Date, Pickup Location, Drop Location, Duration, Car Type
2. Manager Approval	Approval Automation	Automatically route the submitted request to an authorized approver before fulfillment.
3. Car Availability Check	Vehicle Management	Check whether a suitable vehicle is available for the requested date, location and car type.
4. Automatic Fulfillment Task	Task Automation	Create a Catalog Task and assign it to the Transport Team after approval.
5. Email Notifications	Communication	Notify the requester about approval, rejection and fulfillment progress.
6. Request Status Tracking	Visibility	Allow users and administrators to monitor the request and task status.
7. Car Inventory Table	Data Management	Maintain vehicle type, location, availability and assignment information.
8. Business Rules	Backend Automation	Automate status updates, task assignment and other backend processing.

Step-2: Brainstorm, Idea Listing and Grouping

The brainstormed ideas were grouped into the following solution areas:

Group	Ideas Included	Purpose
Request Intake	Car Rental Request Form	Standardize collection of rental information.
Approval	Manager Approval	Ensure authorization before fulfillment.
Vehicle Management	Car Availability Check; Car Inventory Table	Identify and allocate an available vehicle.
Fulfillment	Automatic Fulfillment Task; Business Rules	Assign work to the correct team and reduce manual coordination.
Communication	Email Notifications	Keep requester and staff informed.
Visibility	Request Status Tracking	Provide transparency throughout the request lifecycle.

Step-3: Idea Prioritization

Ideas were prioritized using Importance and Feasibility. High-importance and high-feasibility ideas were selected as the core implementation features.

Priority	Idea	Importance	Feasibility	Decision
1	Car Rental Request Form	High	High	Core feature
2	Manager Approval	High	High	Core feature
3	Automatic Fulfillment Task	High	High	Core feature
4	Email Notifications	High	High	Core feature
5	Request Status Tracking	High	Medium	Implement
6	Car Availability Check	High	Medium	Implement / enhancement
7	Car Inventory Table	Medium	Medium	Supporting feature
8	Business Rules	Medium	Medium	Supporting automation

Final Prioritized Solution

The selected solution is a ServiceNow-based Car Rental Request Automation system. The core implementation uses a Service Catalog item to capture rental details and Flow Designer to automate approval, conditional processing, Catalog Task creation, retrieval of catalog variables, and email notification. Car availability, Business Rules, tracking, security, testing and deployment are supporting project components.

Expected Benefit: Reduced manual coordination, standardized request information, faster approval and fulfillment, improved visibility, and a consistent end-to-end process.
