

Project Design Phase-II

Data Flow Diagram & User Stories

Date	31 January 2025
Team ID	_____
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) shows how information enters, is processed, stored, and leaves the Car Rental Request Automation system. The Level-0 DFD below represents the main external users, the ServiceNow automation process, and the key data stores.

Main data flows: Employee submits rental details → ServiceNow creates the request → approval is routed to the approver → approved request creates a Catalog Task → Transport Team uses the rental details for fulfillment → status/notification is returned to the requester.

User Stories

Use the following user stories for the Car Rental Request Automation product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Employee / Requester	Car Rental Request	USN-1	As an employee, I can submit a car rental request through the Service Catalog by entering the required rental details.	The request is submitted successfully and a request number is generated.	High	Sprint-1
Employee / Requester	Car Rental Request	USN-2	As an employee, I can provide requested date, pickup location, drop location, duration, car type and reason.	All required fields are captured correctly before submission.	High	Sprint-1
Manager / Approver	Approval	USN-3	As an approver, I can review a submitted car rental request and approve or reject it.	Approval record is created and the approver can select Approve or Reject.	High	Sprint-1
ServiceNow System	Workflow Automation	USN-4	As the system, I can automatically start the approval flow when a Car Rental Request is submitted.	Flow Designer triggers for the selected catalog item and creates the approval action.	High	Sprint-1
Transport Team	Fulfillment	USN-5	As a transport team member, I can receive an automatically created Catalog Task for an approved request.	A Catalog Task is created and assigned to the Transport Team only when approval is approved.	High	Sprint-1
Transport Team	Request Information	USN-6	As a transport team member, I can access the catalog variables needed to arrange the vehicle.	Requested date, locations, duration, car type and other selected variables are available.	High	Sprint-1
Employee / Requester	Notifications	USN-7	As an employee, I can receive an email notification when my car rental request is approved.	An email is sent to the requester with the approval/update information.	Medium	Sprint-2
Employee / Requester	Request Tracking	USN-8	As an employee, I can check the status of my car rental request.	The request displays an understandable status such as submitted, waiting for approval, approved or completed.	Medium	Sprint-2
Administrator	Administration	USN-9	As an administrator, I can monitor the request, approval and Catalog Task records.	The administrator can verify the flow execution and related records.	Medium	Sprint-2
ServiceNow System	Validation / Error Handling	USN-10	As the system, I can prevent incomplete requests from proceeding through the automation.	Mandatory information is captured before submission and invalid/incomplete requests do not proceed.	Medium	Sprint-2

Acceptance focus: The stories cover the core ServiceNow implementation: Service Catalog request submission, Flow Designer approval, conditional creation of a Catalog Task, retrieval of catalog variables, notifications, tracking, and administrator validation.
