

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	_____
Project Name	Car Rental Request Automation in ServiceNow Using Service Catalog and Workflows
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Car Rental Request	Create a Service Catalog item for submitting a car rental request. Capture requested date, pickup location, drop location, duration, car type and reason.
FR-2	Request Validation	Validate mandatory rental information before submission. Prevent incomplete requests from entering the automated process.
FR-3	Approval Automation	Trigger the Flow Designer when the Car Rental Request catalog item is submitted. Create an approval request and route it to an authorized approver.
FR-4	Approval & Fulfillment	Allow the approver to approve or reject the request. If approved, create a Catalog Task and assign it to the Transport Team.
FR-5	Catalog Variables & Notification	Retrieve catalog variables required for fulfillment. Send an email notification to the requester after approval/update.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Service Catalog form and approval process should be simple, clear and easy for employees, approvers and the Transport Team to use.
NFR-2	Security	Only authorized users should submit, approve, manage or fulfill car rental requests according to their ServiceNow roles and permissions.
NFR-3	Reliability	The flow should reliably create approval records, process decisions, create Catalog Tasks and send notifications without losing request information.
NFR-4	Performance	The catalog request and automated flow should execute efficiently with minimal delay in approval, task creation and notification.
NFR-5	Availability	The car rental request service should be available to authorized users whenever the ServiceNow instance is operational.
NFR-6	Scalability	The solution should support an increasing number of employees, requests, approvals and fulfillment tasks without major redesign.

Solution Summary: The proposed ServiceNow solution automates the car rental request lifecycle from Service Catalog submission through approval, conditional fulfillment, Catalog Task creation, catalog-variable retrieval, notification and request tracking.
