

Project Design Phase

Proposed Solution Template

Date	16 September 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	Car Rental Request in ServiceNow
Technology	ServiceNow – Service Catalog and Workflows
Maximum Marks	2 Marks

Proposed Solution Template:

The project team shall fill the following information in the proposed solution template. The six parameters below follow the uploaded sample structure. ■filecite■turn17file0■L8-L17■

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Car rental requests can involve collecting trip details, checking vehicle availability, obtaining manager approval and coordinating fulfillment. Without a standardized process, request tracking and unavailable-vehicle handling can be difficult.
2.	Idea / Solution description	Implement a Car Rental Request system in ServiceNow using a Service Catalog item and workflows / Flow Designer. The form captures Car Type, Pickup Location, Drop Location, Requested Date and Justification. The workflow checks configured car availability, routes the request for manager approval and supports fulfillment. The configured unavailable-car path can create an incident, and a Business Rule can prevent assignment when availability is not Available.
3.	Novelty / Uniqueness	The solution brings request submission, availability checking, approval routing, fulfillment and exception handling into one structured ServiceNow request lifecycle instead of relying on disconnected manual coordination.
4.	Social Impact / Customer Satisfaction	The system provides a consistent way to submit rental information and follow the request process. It can reduce confusion around availability and approval status and give the fulfillment team centralized request information.
5.	Business Model (Revenue Model)	This is primarily an internal workflow-automation solution rather than a standalone revenue product. For a car-rental organization, it can support operational efficiency. A commercial version could be delivered as a ServiceNow implementation/customization service, depending on the organization's business model.
6.	Scalability of the Solution	The solution can be extended with additional vehicle types and locations, live fleet-inventory integration, automatic vehicle assignment, cancellation/modification, dashboards and analytics, notification/escalation rules, and integrations with external fleet or rental systems.

Solution Flow: Requester → Service Catalog → Car Rental Request → Availability Check → Manager Approval → Approved/Rejected → Fulfillment / Exception Handling → Request Status.

Source alignment: the uploaded template is a Project Design Phase document titled "Proposed Solution Template" and asks for Problem Statement, Idea / Solution description, Novelty / Uniqueness, Social Impact / Customer Satisfaction, Business Model (Revenue Model), and Scalability of the Solution.
