

Acceptance Testing

UAT Execution & Report Submission

Date	14 September 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	Car Rental Request System in ServiceNow
Maximum Marks	4 Marks

1. Purpose of Document

The purpose of this document is to briefly explain the User Acceptance Testing (UAT) coverage, test status and open issues for the Car Rental Request System at the time of release to UAT. The system allows users to submit car rental requests through a ServiceNow Service Catalog item, processes requests through configured workflows/Flow Designer, routes manager approval, checks the configured car-availability condition, and handles unavailable-car cases through the configured incident process.

2. Defect Analysis

This report records UAT defects by resolution and severity. Since this document is a project-specific UAT report template and no executed defect log was supplied, defect counts are left as 'TBD' rather than being presented as completed test results.

Resolution	Severity 1	Severity 2	Severity 3	Severity 4	Subtotal
By Design	TBD	TBD	TBD	TBD	TBD
Duplicate	TBD	TBD	TBD	TBD	TBD
External	TBD	TBD	TBD	TBD	TBD
Fixed	TBD	TBD	TBD	TBD	TBD
Not Reproduced	TBD	TBD	TBD	TBD	TBD
Skipped	TBD	TBD	TBD	TBD	TBD
Won't Fix	TBD	TBD	TBD	TBD	TBD
Totals	TBD	TBD	TBD	TBD	TBD

3. Test Case Analysis

This report shows the planned UAT test coverage for the ServiceNow Car Rental Request System. Actual pass/fail counts should be updated after execution in the ServiceNow test instance.

Section	Total Cases	Not Tested	Fail	Pass
Service Catalog Request	2	TBD	TBD	TBD
Request Validation & Submission	2	TBD	TBD	TBD
Workflow / Flow Processing	2	TBD	TBD	TBD
Manager Approval / Rejection	2	TBD	TBD	TBD
Car Availability & Incident	2	TBD	TBD	TBD
End-to-End Request Processing	1	TBD	TBD	TBD
Notifications / Status	1	TBD	TBD	TBD

4. UAT Test Coverage

UAT ID	Scenario	Expected Outcome	Execution Status
UAT-001	Submit valid Car Rental Request	Catalog request is created with the entered details.	Not Executed
UAT-002	Validate required catalog fields	Required/invalid values are handled correctly.	Not Executed
UAT-003	Available-car request	Request follows the normal workflow path.	Not Executed
UAT-004	Unavailable-car request	Configured unavailable-car exception path is triggered.	Not Executed
UAT-005	Manager approval	Approved request proceeds to the configured next stage.	Not Executed
UAT-006	Manager rejection	Rejected request receives the configured rejected outcome.	Not Executed
UAT-007	Incident creation	Incident is created when the configured unavailable-car condition is met.	Not Executed
UAT-008	Request status tracking	Request status reflects its current/final workflow state.	Not Executed
UAT-009	Notification validation	Configured notifications are generated at required stages.	Not Executed
UAT-010	End-to-end processing	Complete request lifecycle works as specified.	Not Executed

5. Open Issues / Risks

Issue / Risk	Impact	Status / Action
UAT execution results not yet recorded	Final pass/fail totals cannot be confirmed.	Update after UAT execution.
Defect counts not supplied	Defect-analysis totals cannot be confirmed.	Update from actual defect log.
ServiceNow instance URL not supplied	Test environment reference is incomplete.	Add test-instance URL before submission.

6. UAT Release Recommendation

Release recommendation: To be determined after UAT execution. The project should proceed to deployment only after critical UAT scenarios pass and any critical/high-severity defects are resolved or formally accepted.

7. Final Report Output

Final UAT report should contain the executed test-case results, final defect totals by severity and resolution, open issues, tester feedback, and the required sign-off before deployment.
