

Project Demonstration

Car Rental Request in ServiceNow

Date	14 September 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	Car Rental Request in ServiceNow
Technology	ServiceNow – Service Catalog and Workflows
Maximum Marks	2 Marks

Project Overview

This demonstration presents the **Car Rental Request System in ServiceNow** using a Service Catalog item and workflow automation. The walkthrough shows how a user submits a car rental request, how the request moves through availability and manager approval, and how the system handles an unavailable car by creating an incident when configured.

Demonstration Flow

Step	Project Demonstration	Evidence to Show
1	Open ServiceNow Service Portal / Service Catalog	Service Catalog home page
2	Open the Car Rental Request catalog item	Catalog item and request form
3	Enter car rental request details	Configured catalog variables
4	Submit the request	Submitted request / request number
5	Run the workflow / Flow Designer process	Workflow stages and conditions
6	Check car availability	Available / unavailable decision
7	Send request for manager approval	Approval record and status
8	Show approved or rejected outcome	Final approval status
9	Handle unavailable-car scenario	Incident created when configured
10	Show request status and related records	Request / incident details
11	Demonstrate notifications if configured	Notification evidence
12	Show end-to-end completed flow	Complete request lifecycle

Project Walkthrough Script

Start from the ServiceNow Service Catalog and open the **Car Rental Request** item. Enter the required rental details and submit the request. Show the request record and demonstrate how the configured workflow processes the request. Explain the car availability check and then show the manager approval step. Demonstrate both approval and rejection paths where available. For an unavailable car, show the configured exception handling and the incident record. Finish by showing the request status and the complete end-to-end flow.

Final Validation Checklist

- Car Rental Request catalog item opens correctly.
- Required request information can be entered and submitted.
- Workflow / Flow Designer process starts as configured.
- Car availability condition is evaluated.
- Manager approval is triggered as configured.
- Approved and rejected outcomes are reflected in the request.
- Unavailable-car handling works as configured.
- Incident is created for an unavailable car when that automation is configured.
- Request status and related records can be viewed.
- Notifications work if configured in the project.

- End-to-end request lifecycle can be demonstrated.

Submission / Evidence Checklist

Item	Status
Ideation Phase	Included
Requirement Analysis	Included
Project Planning Phase	Included
Project Design Phase	Included
Project Development Phase	Included
Project Documentation	Included
Project Demonstration	Included
ServiceNow Update Set XML	If included in submission
Original README	If included in submission
Screen Recording	If included in submission
Student Name	Not provided
Team ID	PNT2022TMIDxxxxxx

Demonstration Evidence to Capture

1. ServiceNow Service Catalog home page.
2. Car Rental Request catalog item and its variables.
3. Submitted request record.
4. Workflow / Flow Designer execution or configured process.
5. Car availability decision.
6. Manager approval record.
7. Approved and rejected request outcomes.
8. Unavailable-car incident record, where configured.
9. Request status and related records.
10. Notifications, if configured.

Project Outcome

The Car Rental Request system provides a centralized ServiceNow process for submitting and managing vehicle rental requests. Service Catalog provides the user-facing request form, while workflow automation coordinates availability checking and manager approval. The configured exception path can create an incident when a requested car is unavailable, supporting structured handling of the request from submission to final status.

Note

This document follows the structure of the uploaded Project Demonstration template. Template-specific medical-center terminology has been replaced with the corresponding Car Rental Request / ServiceNow terminology. Items such as notifications or Update Set evidence are marked as conditional where their actual configuration was not provided.
